(a) Integration methods: hollow = clean, filled = noisy mean ± std
ε_{L2} (-)
10^{0}
10^{-1}
10^{-2}
10^{-3}
Direct path 1 (x then y)
Direct path 2 (y then x)
Direct (path avg.)
Poisson
Poisson (velocity source)
Omni-directional
Taylor-Green
Kovasznay Re=20
(b) Boundary conditions (Poisson): hollow = clean, filled = noisy mean ± std
ε_{L2} (-)
10^{0}
10^{-1}
10^{-2}
10^{-3}
All-Neumann (pin mean)
All-Neumann (pin node)
Bernoulli on 1 edge
Exact p on 1 edge
Bernoulli on 2 opposite edges
Exact p on 2 opposite edges
Taylor-Green
Kovasznay Re=20
